TECHNICAL SKILLS

Languages
Python · JavaScript · TypeScript · C++ · C · SQL · Cypher

Frameworks
Flask · Next.js

Database
MySQL · Neo4j

Testing & QA
pytest · Cypress

DevOps & Infra
Docker · Minikube · Grafana · Prometheus · Locust

Tools
Git · GitHub · GitLab · VS Code · CLion · Visual Studio

CORE STRENGTHS

- Problem Solving
- Analytical Thinking
- Fast Learner
- Agile Teamwork
- Attention to Detail
- Clear Communication
- Cross-Cultural Collaboration

EDUCATION

BSc Software Engineering
BTH, Sweden — in progress, 2024–Present

MSc Finance & Banking
Academy of Finance, Vietnam — 2010–2012

BSc Accounting
ULSA2, Vietnam — 2005–2009

LANGUAGES

Vietnamese — Native
English — Professional
Swedish — Professional

PROFILE

Results-driven Software Engineering student (BTH, Sweden) who ships working full-stack applications, not just coursework. Delivered a production-grade monitoring framework for Ericsson that earned direct praise from the client team for technical quality, initiative, and professionalism. Brings 15+ years of prior professional discipline — leading quality control at a bank and instructing in Swedish classrooms — into a fast, hands-on approach to learning new technologies and owning problems end-to-end. Looking to bring that same drive into a software development internship.

RELEVANT PROJECT EXPERIENCE

Continuous Performance Monitoring Framework | Project for Ericsson

- Delivered a full-stack Python monitoring framework end-to-end within a team of 5, covering both front-end dashboards and back-end data pipelines.
- Contributed to technical documentation and presented progress directly to Ericsson stakeholders through live demos.
- Self-taught Locust, Prometheus, and Grafana from scratch — client-recommended tools the team explored together — and used them to build real-time dashboards that visualized performance, tracked trends, and exported reports for stakeholders.

Stack: Python, Locust, Grafana, Prometheus, SQLite, Docker, Minikube, pytest, Cypress, GitLab

Client feedback: the Ericsson team praised the group's collaboration, initiative, and growth mindset, and noted the final product was a solid, well-rounded application across front end and back end.

Restaurant Ordering System & Kitchen Dashboard | Group Project, BTH

- Designed and shipped a full-stack Flask ordering platform with a live kitchen dashboard — the team's first production-style delivery, achieving full marks against every project requirement.
- Drove project planning and reporting, and built the test suite with pytest before shipping the app in Docker.

Stack: Python, Flask, SQLite, pytest, Docker

Teacher feedback: course instructors awarded full marks for meeting every project requirement, with extra credit specifically for the depth of the team's reflections.

Graph Editor | Individual Project, BTH

- Independently designed, built, and shipped an interactive graph visualization tool from the ground up, mastering three new technologies (JavaScript, TypeScript, Neo4j) along the way.
- Solved non-trivial technical challenges independently and documented every design decision for future maintainability.

Stack: JavaScript, TypeScript, Neo4j

EXPERIENCE & LEADERSHIP

Mathematics Exercise Session Leader | BTH, Sweden Autumn 2026

- Hand-picked by the Mathematics Department as 1 of just 3 students trusted to lead weekly sessions for first-year students — co-designing material and breaking down complex concepts for learners at every level.

Operations Officer & Controller | Vietnam Maritime Bank 2015 – 2019

- Owned quality control across operations teams of 5–10 staff, enforcing strict compliance with internal guidelines.
- Trained staff through major procedural changes and coordinated cross-department communication during a full core banking system migration.

Preschool Teacher | Rödeby Förskola Tallbacken 2022 – 2024

- Delivered clear, accurate documentation and regular communication with parents, colleagues, and multidisciplinary teams.
