TECHNICAL SKILLS

Languages

Python · JavaScript · TypeScript · C++ · C · SQL · Cypher

Frameworks

Flask · Next.js

Database

MySQL · Neo4j

Testing & QA

pytest · Cypress

DevOps & Infra

Docker · Minikube · Grafana · Prometheus · Locust

Tools

Git · GitHub · GitLab · VS Code · CLion · Visual Studio

CORE STRENGTHS

- › Problem Solving
- › Analytical Thinking
- › Fast Learner
- › Agile Teamwork
- › Attention to Detail
- › Clear Communication
- › Cross-Cultural Collaboration

EDUCATION

BSc Software Engineering

BTH, Sweden — in progress, 2024–Present

MSc Finance & Banking

Academy of Finance, Vietnam — 2010–2012

BSc Accounting

ULSA2, Vietnam — 2005–2009

LANGUAGES

- Vietnamese — Native
- English — Professional
- Swedish — Professional

PROFILE

Results-driven Software Engineering student (BTH, Sweden) who ships working full-stack applications, not just coursework. Trusted to co-own a bank-wide system migration before ever writing a line of production code — that same ownership carried straight into a production-grade monitoring framework built for Ericsson, earning direct praise from the client team for technical quality, initiative, and professionalism. Brings 15+ years of prior professional discipline, from leading quality control at a bank to instructing in Swedish classrooms, into a fast, hands-on approach to learning new technologies and owning problems end-to-end. Looking to bring that same drive into a software development internship.

RELEVANT PROJECT EXPERIENCE

Continuous Performance Monitoring Framework | *Project for Ericsson*

- Delivered a full-stack Python monitoring framework end-to-end within a team of 5 — serving as Project Owner for the first and last sprints while covering both front-end dashboards and back-end data pipelines.
- Owned technical documentation and served as lead presenter for every client and academic demo.
- Self-taught Locust, Prometheus, and Grafana from scratch — client-recommended tools the team explored together — and used them to build real-time dashboards that visualized performance, tracked trends, and exported reports for stakeholders.

Stack: Python, Locust, Grafana, Prometheus, SQLite, Docker, Minikube, pytest, Cypress, GitLab

Client feedback: *the Ericsson team praised the group's collaboration, initiative, and growth mindset, and noted the final product was a solid, well-rounded application across front end and back end.*

Restaurant Ordering System & Kitchen Dashboard | *Group Project, BTH*

- Designed and shipped a full-stack Flask ordering platform with a live kitchen dashboard — the team's first production-style delivery, achieving full marks against every project requirement.
- Drove project planning and reporting, and built the test suite with pytest before shipping the app in Docker.

Stack: Python, Flask, SQLite, pytest, Docker

Teacher feedback: *course instructors awarded full marks for meeting every project requirement, with extra credit specifically for the depth of the team's reflections.*

Graph Editor | *Individual Project, BTH*

- Independently designed, built, and shipped an interactive graph visualization tool from the ground up, mastering three new technologies (JavaScript, TypeScript, Neo4j) along the way.
- Solved non-trivial technical challenges independently and documented every design decision for future maintainability.

Stack: JavaScript, TypeScript, Neo4j

EXPERIENCE & LEADERSHIP

Mathematics Exercise Session Leader | *BTH, Sweden*

Autumn 2026

- Hand-picked by the Mathematics Department as 1 of just 3 students trusted to lead weekly sessions for first-year students — built the exercise curriculum from scratch, paced to the lectures and shaped by student feedback.

Preschool Teacher | *Rödeby Förskola Tallbacken*

2022 – 2024

- Earned colleagues' trust to independently plan and run group activities, then selected by school management to help plan and manage summer operations during a three-preschool consolidation.

Operations Officer & Controller | *Vietnam Maritime Bank*

2015 – 2019

- Named the region's best-performing Banking Operations Controller in 2015 and 2016, owning quality control across teams of 5–10 staff and consistently delivering 150–200% of performance targets.
- Selected as 1 of 2 specialists to co-own process design for a bank-wide transformation moving Customer Service to Retail Banking, then picked to represent the department on a core banking system migration covering current accounts and savings modules.
